

## Slings, Chains & Spreader Beams

Andron Handling design, manufacture and deliver a complete range of standard and bespoke lifting accessories to complement our cranes and manipulators.

- Modular standard designs available
- Bespoke design and build service
- Feasibility studies
- 3D Virtual prototyping
- Prototype and production manufacturing service
- Advanced simulation studies
- Designed and tested in accordance with BS EN 13155

Andron can design and manufacture custom lifting accessories for any application.

Our selection of easily configured standard designs allow us to provide a fast and economical service, based on robust, well proven solutions.

As with any Andron product, if our standard designs aren't exactly what you are looking for, our professional engineering team can develop bespoke designs from scratch, drawing on a huge library of previous solutions.

*Configurable spreader plate for multi-point lifting, used in engine manufacturing facility*

## Modular Spreader Beam

We have several standard spreader beam designs with modular accessories available to suit a range of applications. The example shown is used in a high-volume engine manufacturing facility

## Bespoke Wire Rope Sling

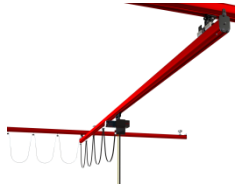

Supplied with a custom designed set of flange clamps, this sling set is used for handling high value, sensitive aero engine components

**Crane Hook Shock Absorber**  
Designed to reduce the risk of damage to delicate parts, our unique shock absorbing system is made to order to suit your precise combination of crane and load. Designed to fit in-between the crane hook and the lifted load or lifting accessory in use, an internal spring allows the lift pin to move within the outer barrel as the load is applied. Colour coded markings can be applied to your specification and indicate if the system is in a safe load range.

**Standard Hook Kit**  
We supply many standard lifting accessories. The hook kit shown suits our range of air balancers, and comes complete with safety latch, thimble and barrel clamp
